TECHNICAL SKILL

Programming Languages Development Tools

Objective C, Swift, C#, SQL, HTML, javascript, CSS
XCode, MS Visual Studio 2013, Selenium,
BDD/Specflow, Cucumber, NUnit, Bootstrap, ADO.NET

Other Tools

Source Tree/Git, Team City, Spira, Team &
JIRA tracking tools, JMeter

DBMS

SQL Server, Firebase, Parse and Realm

Methodologies

Agile Development

Operating Systems

Windows (all versions), Mac OS X / Terminal window

iOS Projects

[xkcd view and share](#) (currently under review with iTunes Connect)

This app mirrors the comic viewing functionality of the xkcd website. Written in swift users can also share a favorite comic to a social media (if installed). I have submitted this app to the app store and is currently under review.

[TravelJournal](#)

Final project from a team of 3 people built with Swift and firebase. An app that captures travel stories which allows users to upload text, images and location to share with other people. Firebase was used for signup/login as well as saving data and images.

[Eventbright](#)

Mid term project that utilizes an API provided by Eventbright built with objective-C. This app prompts the user for search criteria (category, start date etc) for events happening in their city, or any other city in North America, and displays the results to a map with pin/annotations. Tapping the annotation will show an Eventbright page for more details about the event.

PROFESSIONAL EXPERIENCE

E-xact Transactions LTD

2015 – 2016

Automation Engineer (Contract)

Part of a growing team focused on delivering reliable, secure online transaction solutions.
